

Evidence of Evolution

1. FOSSILS:

- Any preserved remains, impression, or trace of any once-living thing from a past geological age.
- Examples include bones, shells, exoskeletons, stone imprints of animals or microbes, objects preserved in amber, hair, petrified wood, oil, coal, and DNA remnants.

Evidence of Evolution

2. GEOGRAPHY:

- The study of the distribution of organisms around the world
- Species in one area may match species in another area that is separate but still nearby

Evidence of Evolution

3. EMBRYOLOGY:

- The branch of biology and medicine concerned with the study of embryos and their development
- Two different species may have larvae that are very similar.

Evidence of Evolution

4. ANATOMY:

- Some of Darwin's best evidence came from comparing the body parts of different species
- Homologous Structures and Analogous Structures
